## Abstract

This document does not have any scientific significance. It describes purely the format instructions for abstract (within 1 page), extended-abstract (2-3 pages) and full-paper (4-20 pages) for ICCM. Note that we will produce a Presentation and a Full-Paper Proceedings online. Only the full paper proceeding will be submitted to EI/SCI to apply for indexing, which is based on the EI/SCI regulations. We do not guarantee that the paper proceedings will be indexed by EI/SCI. We will definitely apply for it.

It is our intention to be flexible in format, yet maintain a reasonable consistency in the proceedings. The unified template for abstract/paper is available at our website. It is the author's choice to submit either an abstract (or extended-abstract) or a full-paper, using this same template. In all cases, please provide approximately 4-6 keywords that best reflect the scientific/technical contents, for easy indexing when readers are trying to search for abstracts or papers. The editor(s) of the proceeding have the right not to include the accepted abstracts or full-papers into the proceedings, if the format does not meet the standard format given by the templates.

When choosing to just write an abstract, you may ignore all the other sections starting from the "Introduction" section. When choosing to write an extended abstract, you may include whatever the other sections at your own discretion. The maximum page number for a paper can be as many as 20, and the maximum size of your pdf file can be as much as 2MB. The losing rule on these maximum limits is not-to-give you too much pressure purely for the sack of the volume limitation. At the sometime, it is not out-of-control. Note that a concise paper has been proven most effective to the authors and readers, and it is much more efficient when it is stored and transmitted in real-time over the internet. We trust and rely on your professionalism to keep the paper as concise as possible. If you have big images, it is advisable to reduce the resolution to a manageable level. In addition, if you just want to submit a short abstract (less than 3000 characters in total) and it contains only pure text, you can submit your abstract as part of the META data input (via copy & paste) when you creating your account. In this case, you can use free format and do not have to upload any pdf files. It will be treated as normal abstract, peer-reviewed, edited and published online.

Keywords: Computation, Berkeley, Stanford, Silicon Valley, Natural beauty, Carefully prepared.

## Introduction

The abstracts and papers will all be peer-reviewed and be published in the online Proceedings. The selected papers will be recommended for publication in a special issue in one

of the conference official journals. Authors are encouraged to make the paper as concise as possible, considering readers may choose to print hardcopy of your paper. Author will be asked to reduce the length and size, if it is too extreme.

This document describes the required format for extended abstracts and full papers. Your manuscripts should be submitted online before the deadline. Please create an account at the conference website <http://www.sci-en-tech.com/ICCM/>, before submitting your manuscript. Please keep a record of your account ID and password for your future use to update your submitted data and manuscripts.

#### Format Requirements

The templates for abstract and full paper in WinWord and  $\text{\LaTeX}$  format are provided at the conference web site mentioned earlier. You may simply download and use one of them as a template to produce your paper. Please follow the general instructions as given below.

#### General Format Requirements

The general format requirements are as follows:

1. Paper (A4 size paper): the full paper should have word limit of 20,000.
2. Margins: 2.5 cm top and bottom; 2.5 cm on sides.
3. Header: Keep the header and footer only in the first page as it appears in the template.
4. Title: 14 pt bold Times New Roman, centered.
5. Authors Affiliation: Name: 12 pt bold Times New Roman; address: 10 pt Times New Roman
6. Section Headings: 12 pt bold Times New Roman.
7. Section Subheadings: 12 pt italic Times New Roman
8. Body text: 12 pt Times or Times New Roman, single spacing, justified on both margins, one blank line between paragraphs, no indentation for beginning of a paragraph
9. Figures: Insert in text where appropriate, with 12 pt Times New Roman caption centered below the figure as shown in the example below.
10. Tables: As with Figures, but with caption centered above the table.
11. Equations: Centered, with equation number at the right, one blank line above and below.
12. Units: SI units are preferred.
13. References: 10 pt times.

If you use the  $\text{\LaTeX}$  template, you can basically ignore all these requirements except the unit system.

Authors are responsible for obtaining permission for reprinting any material included in their papers that is already copyrighted elsewhere.

$$F = ma \tag{1}$$

Figure and table examples are given in Fig. 1 and Table 1 below.

Figure 1: A plate not for meal

Table 1: Identified results

Actual Value	Results for different noise levels	
	free	2%
0.973	0.967(-0.6%)	0.974(0.1%)
0.875	0.860(-1.7%)	0.866(-1.0%)
0.657	0.656(-0.01%)	0.671(2.1%)
0.488	0.488(0%)	0.502(2.9%)
0.271	0.276(2.0%)	0.259(-4.3%)

## Conclusions

References are numbered and should appear at the end of the paper in  $\LaTeX$ template. References should be cited in text in square brackets by numbering [1]. If a citation cites two or more papers, they should be cited as [2]-[6] or [3][5][8].

If you have any questions concerning these format instructions, please contact ICCM Manager Joanne Wang by e-mail at iccmdesk@gmail.com.
